

## On the Subject of The Exploding Pen

*Are you taking notes yet?*

1. Start with the number of indicators, and multiply it by the last digit of the serial number.
2. Now modulo your result by 10 and add 1.  
This is the number of times you have to click the pen to solve the module.
3. Now using the the color of the pen, the color of the ink (Shown by the color of the text on the sticky note block.) and the name of who left you the voice message. Use the tables below to find the time you can click the pen because you don't just sit at the phone all day.
4. To solve the module, click the pen the number of times you calculated in step 2, when the seconds digits of the bombs timer are equal to the number you found from the table in step 3.

If the pen is clicked at the wrong time, or an incorrect amount of times, a strike will be given and the module will reset and your previous clicks are reset to zero.
